DETAILED ACTION

1. Receipt is acknowledged of Applicant's Amendment, filed July 24, 2007.
2. Claims 1-3, 7-8, 10-12, 14, 16-17, 23-24, 26-29, 33-34, and 36-45 have been canceled.
3. Claims 46-70 have been added.
4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 35, 48, 52, and 57-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCubbin in view of Fraser et al. McCubbin discloses a tool honing guide and bevel setting jig for honing a tool comprising substantially all of the subject matter set forth in Applicant's claims above, except for the recitation of the tool clamping bars having a concave surface. Note guide(12) comprising tool holder(11,18) and roller(20); and jig(21') for removable coupling to the guide to set the tool at selective sharpening angles. The tool is secured in a guide by drawing a tool securing bar against the guide reference surface, and an adjustable stop(32) is used to establish the extent of projection of the tool from the guide for sharpening at the proper angle. To modify the tool in McCubbin by providing concave surfaces on the clamping bars, to provide plural areas of contact to prevent shifting during use, would have been obvious in view of Fraser et al.

6. Claims 50, 61, 63-64, and 68-70 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCubbin in view of Fraser et al, and further in view of McLean. McLean discloses a honing guide for sharpening cutting tools at selectively adjustable sharpening angles, having means in the form of an eccentrically mounted roller and spring biased height adjustment means located on the roller axle, to selectively adjust the height of the roller axle and hence the sharpening angle of the tool holder. To provide such means for adjusting the angle of the tool holder in the device of McCubbin, to automatically present the tool holder at a predetermined angle for sharpening, and avoid errors inherent in manual adjustment to the proper angle, would have been obvious in view of McLean.

7. Claims 4-6, 9, 13, 15, 18-22, 25, 30-32, 46-47, 49, 51, 53-56, 59-60, 62, and 65-67 are allowed.

8. Applicant's arguments filed July 24, 2007 have been fully considered but they are not persuasive. Applicant's new limitation in independent claim 35, of the clamping bars being of concave shape, is deemed to be obvious over McCubbin in view of Fraser et al. With regard to claims 50, 61, 63-64, and 68-70, McLean is deemed to teach the use of an eccentrically mounted roller and spring biased height adjustment means located on the roller axle, to selectively adjust the height of the roller axle and hence the sharpening angle of the tool holder. To provide such means for adjusting the angle of the tool holder in the device of McCubbin, to automatically present the tool holder at a predetermined angle for sharpening, and avoid errors inherent in manual adjustment to the proper angle, would have been obvious in view of McLean.

9. In view of the new grounds of rejection not necessitated by Applicant's response, this action is not made final.
